

Branch: Wood and associated materials

Code: CARFIT

Option: Carpentry and Fittings

Level : BEP

Prerequisites: BEPC and/or CAP

Opportunities:

- In a carpentry company
- In a craftsman's workshop
- In an SME

Description

To manufacture wooden elements such as kitchen furniture, doors, stairs, gates, shutters, windows and various other equipment from customers' orders, which are to be installed in private houses, public buildings or commercial premises.

This activity is directly linked to the construction industry.

The objects are made from boards of various woods "rough sawn" in which the professional will carry out successive operations (cutting, tracing, assembly, woodworking, shaping of the various elements). This work makes it possible to produce single pieces or small series with the help of machine tools whose use can be managed by computer.

Quality and competences :

1

The future carpentry professional must also be capable of care and precision in his work. A good understanding of shapes and volumes in space as well as a correct level of mathematics and geometry are desirable.

2
