

Branch : Medical-Sanitary

Code : DENPRO

Option : Dental prosthesis

Level : Bac Pro

Prerequisites :

Opportunities :

The technician carries out his or her activity, under the authority of a manager or head of laboratory, in different environments: craft companies, SMEs, multinationals or public companies involved in the manufacture of made-to-measure dental prostheses, the sale of products or services to dental professionals.

Description :

Qualified technicians, holders of the Bac Pro Dental Prosthesis, analyse, design, produce, repair, modify and make certain types of dental prostheses, under the responsibility of their supervisor. Capable of assuming the day-to-day administrative management of stocks, technical and financial means and human resources, they organise production and contribute to the dynamism of the company that employs them.

Quality and competences :

The aim of the bac prothèse dentaire is to provide basic knowledge enabling certain prostheses to be made (removable, orthodontic, fixed, implants, etc.).

Students learn how to design a prosthesis: they analyse the prescription, design a study model or an impression, and make a model using specialised software in

certain cases. They acquire all the techniques required to make a prosthesis or repair it if necessary.

They develop the skills necessary to maintain the equipment and the workstation and to carry out checks at each

They develop the skills necessary to maintain the equipment and workstation and to carry out checks at each stage of manufacture.

They are capable of ensuring the current administrative management (of stocks, technical and financial means, human resources).
