

Branch : Mechanical and Production Engineering

Code : MATWAM

Option : Manufacturing technician for wood and associated materials

Level : Bac Pro

Prerequisites :

Opportunities:

As part of their activities, graduates may be required to take on responsibilities within a team in order to ensure the smooth running of manufacturing and related operations (maintenance, control, optimisation, safety).

After a few years' experience in a wood manufacturing workshop, they may progress to the qualification of workshop manager.

Description :

The holders of this vocational baccalaureate are workshop technicians in joinery and furniture companies for the production, in small or medium series, of works in wood and associated materials. They master the techniques of manufacturing products or components: furniture, fixtures, exterior and interior joinery, industrial carpentry and glued laminated wood elements. These professionals are responsible for the manufacture and packaging of parts, as well as monitoring and controlling production. They participate in the maintenance of equipment and the organisation of work. They may be required to take on responsibilities

within a team to ensure the smooth running of production and maintenance operations.

Quality and competences :

1

associated materials in joinery and furniture companies.

Students learn to prepare for the manufacture of joinery and furniture products. They acquire the techniques necessary to manufacture and package the work, monitor and control the manufacture, and participate in the maintenance of the equipment.

The training gives them the skills to take part in organisational activities and to master the techniques of products or components such as furniture, furnishings, exterior and interior joinery, industrial frameworks and laminated wood elements.
