

## Branch : Handicrafts and crafts

**Code :** FIFIBU

**Option :** Fitting and finishing of the building

**Level :** Bac Pro

**Prerequisites :**

**Opportunities:**

Graduates work mainly in painting, fitting out or coating companies, for the construction or renovation of buildings such as homes, business premises, sports centres, etc. They hold positions as professional journeymen or site technicians in fitting out and finishing. They work as professional journeymen or as site technicians in fitting and finishing.

**Description :**

Holders of this vocational baccalaureate work on building sites, in the context of new or renovated buildings, for the implementation of various interior works (partitions, ceilings), the installation of coverings (walls, floors) and the application of finishing products (plaster, paint, etc.). Their duties relate to the execution and management of the work. They are responsible for the continuity of the site and for meeting deadlines. Under the responsibility of company managers or works supervisors, they carry out their work based on the technical studies carried out by the company. These professionals are also responsible for managing and leading a team of four or five people.

---

**Quality and competences :**

This vocational baccalaureate trains students to work on a building site for the implementation of interior works (partitions, ceilings), for the installation of coverings (walls, floors) and for the application of finishing products.

Students learn to read a file defining a construction site, then establish material requirements, estimate costs, prepare estimates and a provisional work schedule which they can organise, lead and manage.

These future interior design professionals develop the skills needed to lay wall or floor coverings, carry out a renovation or structure the interior of a room using paint plates.

They are also prepared to carry out more complex painting work or to analyse the thermal or acoustic conditions of a room in order to decide on insulation work, but also to set up a site, erect scaffolding and take charge of most of the fittings that take place at the end of the work.
