

# Branch : Medical-Sanitary

**Code :** HYCLST

**Option :** Hygiene, cleanliness, sterilisation

**Level :** Bac Pro

**Prerequisites :**

**Opportunities:**

This diploma enables you to work in organisations (companies, communities) whose activities are linked to the sterilisation of medical devices (hospitals, clinics, etc.) as well as to the maintenance of premises outside risk areas (commercial, administrative, industrial, sports and cultural premises) and premises in risk areas (care establishments, medico-social establishments, laboratories).

**Description :**

This vocational baccalaureate enables you to organise interventions in the hygiene and cleaning sector (planning, management of equipment, implementation of prevention plans, sterilisation operations, maintenance techniques, including in sensitive environments). The cleaning agent is able to manage maintenance operations and lead a team.

**Quality and competences :**

The bac pro hygiene, cleanliness, sterilisation trains students to take charge of work sites in the cleanliness, hygiene and sterilisation sectors.

---

The student learns the techniques applied to waste management, medical device sterilisation operations and the cleaning/hygiene of premises in risk areas. He or she learns to respond to a customer request, analyse the needs and propose a technical solution.

The knowledge acquired in the course of the vocational baccalaureate enables him or her to organise work sites (duration, method, materials, personnel), to set them up and to ensure their follow-up.

The lessons in applied sciences give him the ability to control or assess the application of regulations, risk management and quality control.
