

Branch: Building design technician

Code : STREFI

Option : Study and realization of fittings

Level : Bac Pro

Prerequisites:

Opportunities:

Graduates work in small or medium-sized companies that design, manufacture and install interior and exterior fittings (individual or collective housing, professional premises, establishments open to the public, shops, cafés, restaurants, etc.).

After a few years' experience in a design office and on site, they can progress to the qualification of works manager.

Description :

The holders of this vocational baccalaureate are layout technicians. They work in a design office to participate in the technical design of the project. On site, they organise the implementation of interior and exterior fittings (homes, professional premises, shops, etc.) in accordance with the architectural and decorative spirit of the project.

Quality and competences :

The vocational baccalaureate (bac pro) in architectural space design trains students to produce interior and exterior fittings and furnishings.

The knowledge acquired during the course enables students to participate in the finalisation of the aesthetic study and the definition of a project.

They learn to prepare the technical execution of a multi-material project based on the concepts and standards of the layout and the architectural specifications.

The teaching of the vocational baccalaureate gives them the ability to organise, plan, lead and manage the follow-up of the implementation on site with the intervention of several trades.
